

## SOLISIUM TOKEN

SOLS is a deflationary, censorship resistant token, with a scarce supply and distribution on Fantom and BSC. As it conforms to the Solisium standards, the SOLS token is tradable on the Swap contract, allowing us to waive the initial taxes on purchases (10%), providing the best value and highest liquidity, resulting in lower slippage for for larger purchases.

SOLS can be deposited into the Stake contract to provide a consistent 3% daily return (up to 540% of initial principal amount) for participation over time. Additionally, users can add FTM or BNB into the SOLPounding contract to earn an additional 8% daily return. Solisium is strictly curated deflationary daily ROI token that pays users and referrers from a tax on transactions and not through inflation.

## STAKE 3% CONTRACT

The staking contract was designed to offer a 3% daily return (540% maximum payout) passively through a well developed contract that is secured against drainage with the possibility of minting new tokens to cover all earnings. The tax pool is maintained by the 10% tax on all transactions excluding the direct purchases from our Swap page as well as the 5% tax on compounding and will be backed by our multi-chain staking contracts.

Users can participate by purchasing SOLS from our swap page, joining another user's team (10 SOLS minimum requirement) depositing SOLS to the stake contract earns a consistent 3% daily return on their SOLS passively.

Users can also compound their earnings through regular deposits, rolling rewards as well as team based referrals. Unlike many other platforms promising a consistent percentage return, the staking contract cannot drain and will always be able to provide the SOLS that has been earned by users. Rewards come from a 10% tax on all transactions excluding buys from the platform's swap page. If there is ever a situation where the tax pool is not enough to pay rewards, new SOLS can be minted to ensure rewards are paid out, but this has a low probability of happening as the tokenomics were thoroughly vetted to ensure that the pool will maintain a constant amount, furthermore our multi-chain launch will ensure that this will not happen, giving the possibility of cross-chain pool lending and over-time pool fund release from different investment contracts.

The deflationary tokenomics are secured by sending deposited SOLS to a burn address and by locking SOLS in the liquidity pool through the Liquidity Farm contract.

The best strategy for SOLS is to focus on real world adoption by building out your team through direct referrals, as you will receive bonus rewards from referrals on their deposits and downline bonuses from users, their refer based on the amount of SOLS held in their wallet.

By doing so, you will dramatically accelerate your ROI period and allow your team's chain to grow out organically. Not only are users able to passively increase their SOLS holdings in the stake contract through participation over time, but staking also incentivizes users to participate actively by providing lucrative referral rewards for holding SOLS in their wallet and building out their team.

There is also an airdrop feature that lets you proportionately send SOLS to all users in your team. This is a great tool to use for giveaways, promotional events, etc.

## REFERRAL SYSTEM

To incentivize bringing in new users through a network of referrals, SOLS can be used to access rewards from your downline to a maximum of 15 levels. The downline allows you to receive rewards from your team's deposits and tax fees based on the amount of SOLS Token held in your wallet.

In order to successfully make a deposit into the stake contract, you will first need to join someone else's team by adding their wallet address into the team referral system ( minimum requirement is 1 SOLS ). In order to receive referral rewards, users must hold SOLS in their wallet and the depth of the rewards received will be determined by their individual SOLS tier requirements. In addition, accounts must have positive deposit status for direct referral bonus rewards as well.

If an account is not net positive when team members from your downline deposits, or if they do not hold enough SOLS to receive referral bonuses at that level of downline or they were the last person to be credited with a referral bonus, the bonus will go further upline until it hits a member who is eligible for the referral bonus. Using this round robin system, we have eliminated the incentive from self-referring and other bad behavior which is used to leech referral systems, while still greatly rewarding team building through referrals.

Rewards are paid as direct deposits. This will directly and immediately enhance longevity of the platform and also promote long term team building.

## SOLS TIER REQUIREMENTS

DOWNLINES ACCESSIBLE	SOLS IN WALLET
1	5
2	10
3	20
4	30
5	40
6	50
7	60
8	70
9	80
10	90
11	105
12	115
13	125
14	135
15	150

## WHALE TAX

We have added a whale tax on withdrawals to help curve whales ability to outpace other users on the platform, forcing them to kick back some of their rewards to the community and maintain the sustainability of the project! The tax goes as follows, and does not apply to anyone below these staked holdings.

TOTAL SUPPLY %	TAX %
<0.99%	0
>=1%	5
>=2%	10
>=3%	15
>=4%	20
>=5%	25
>=6%	30
>=7%	35
>=8%	40
>=9%	45
>=10%	50

## SOLPounding 8% Stake

Our Limited Time Protocol SOL-POUNDING will only be available for a short time frame, the earlier you stake the better. SOL-POUNDING is the new Solisium staking contract that will run beside our traditional staking contract. The goal of SOL-POUNDING is to give our investors a faster head start into reaching the maximum 540% payout. Stake in SOL-POUNDING and then take your rewards that were building at a faster rate and stake in the 3% contract . SOL-POUNDING is a high reward contract that involves risk like every investment. We have implemented steps to protect investors and protect liquidity, to make sure everyone can benefit from this limited time Protocol. The SOL-POUNDING staking pool is separate from our main 3% staking pool making it impossible to drain the price.

Rules are simple, calculated and tested out with success:

1. Any staked returns need to be compounded every day for 9 days straight.
2. Once you compounded the 9 days specified you can claim in the 10th day so once every 10 days you can claim your rewards if you desire to do so. There will be a 24 hour grace period before your claim button goes inactive so you have a chance to get your rewards. If you miss your claim window you must compound again for 9 days straight to claim again.
3. Sol Pounding will only last 50 days that is why it is a "Limited-Time-Protocol". The early an investor gets in the more time they have to compound to receive maximize rewards on their capital
4. If you claim before the 9 days of compound, your transaction will go through and you will be able to cash out. Your wallet will be removed from participation from the 8% Staking contract ( you can still continue using the 3% Staking contract ) and all of your SOL-POUND staked funds and ongoing rewards will be re-entered in the staking pool as additional liquidity to support the protocol.
5. Tokenomics are the same as the 3% staking contract. The only difference is because the SOLPOUND contract pays out 8% per day , the claim tax will be adjusted to 25% on claim to ensure sustainability of the protocol.

## SOLISIUM MULTI-CHAIN

Going one step further, Solisium is adopting a multi-chain structure that will take SOLS to a new level with cross-chain transfer capabilities, value backing and compounding insurance that will make a safer and more pleasant experience for all users.

Our first layer expansion will be done on the BSC Mainnet that will implement the same tokenomics as the Fantom Mainnet with a very important addition being a cross-chain bridge, making transfers of SOLS from one chain to another as simple as our swap page, therefore allowing any user to move funds with ease.

Implementation of the multi-chain protocol will ensure that the Solisium staking contract on all current and future chain releases will never drain by implementing the cross-chain lending protocol, making Solisium a stable and future-proof protocol for all users.

## SOLISIUM ROADMAP

The Solisium Network is a complete, fully functional and sustainable project. In the weeks following the launch of Solisium Staking, multiple development updates are ready to be pushed which will keep excitement building and give users plenty to look forward to. Below are just a few layers of development that will be pushed after launch.

1. Solisium presale - WHITELIST ONLY (completed for both BSC and Fantom chain)
2. Solisium LAUNCH
3. Multi-Chain protocol expansion
  - AVAX Mainnet launch ( with whitelisting and presale )
  - Arbitrum Mainnet launch ( with whitelisting and presale )
4. Solisium DAO
5. Solisium SMART ( Structured Market Adjusted Risk Tranches ):
  - SMART Yield - Interest rate volatility risk mitigation using debt based derivatives
  - SMART Derivatives - Market price exposure risk mitigation using tranching volatility derivatives
6. Solisium NFT Marketplace.
